

Professor Ole R. Vetaas

Ole.Vetaas@geog.uib.no

He is a vegetation ecologist and biogeographer with research interests in diversity, succession and spatial dynamics. Research in the Himalaya includes human disturbance and diversity in forests, climate niches of trees, wheat production and climate change, and biogeographical patterns in species richness. Recent research deals with introduced trees (alien species) and forest in relation to climate mitigation. Theoretical interests in macro-ecology, gradients and the niche concept.
