Prof Strand is a research scientist at the Innlandet Hospital Trust and holds a secondary position with the Centre for International Health at the university of Bergen. Strand has been affiliated with UiB since 1996 where most of his research has been on intervention and observational studies on micronutrients in women and children in low and middle-income countries. He collaborates with several institutions in the US, EU, Norway, India, and Nepal.

Most of his ongoing work is on zinc and B vitamins on common childhood infections, growth, and cognitive development in young children.
